Due Diligence Project		
Criteria	**Ratings**	**Pts**
Data Review and Grouping	**25 pts** **Proficient** This paper showcases a meticulous and comprehensive data review, with each step carefully outlined to demonstrate a complete understanding of the dataset. Variables of interest are not only clearly identified but are also accompanied by thorough justifications for their selection, reflecting a deep engagement with the data. These variables are intelligently classified into relevant groups, highlighting a strategic approach to data analysis. The inclusion of references is seamlessly integrated, evidencing substantial independent research. Overall, the work is distinguished by its depth of analysis, precision in variable selection and classification, and the clear evidence of a methodical and insightful review process. **23 pts** **Satisfactory** Shows evidence of a solid data review process, identifying key variables of interest with justifications that, while sound, might not be as detailed as in higher-rated work. Variables are classified into groups where applicable, but the rationale and organization may not be as refined. References are present and appropriate, with independent research evident, though possibly not as extensive. The work is competent but lacks the depth or insight of the top tiers. **20 pts** **Needs Improvement** Presents a basic review of the data but the identification of variables and the justification for their selection are somewhat superficial or incomplete. Classification of variables into relevant groups is attempted but may lack clarity or logic. References and evidence of independent research are minimal, indicating a need for more thorough exploration and analysis. The document demonstrates an understanding of the task but fails to meet the full requirements of a comprehensive review. **18 pts** **Unsatisfactory** Offers a limited review of data with insufficient identification and justification of selected variables. There is little to no effective classification of variables into groups, and the work lacks coherence in its approach. References are scarce or poorly integrated, with little to no indication of independent research. The effort does not meet the basic standards expected for a data review process, showing a significant lack of understanding or effort. **0 pts** **Poor/No Efforts** No evidence of any data review process is provided. Fails to identify variables of interest or provide any justification for selections. No classification of variables is attempted, and there are no references or signs of independent research. The submission completely lacks the elements required to meet the criteria of the assignment, showing an absence of effort or engagement with the task.	/ 25 pts

Data Manipulation (a.k.a. Feature Engineering)	**30 pts** **Excellent** This submission demonstrates an exemplary understanding of feature engineering, detailing a well-reasoned analytic plan that is clearly communicated. It meticulously describes the feature engineering process, showcasing the 'before' and 'after' states of the items, with comprehensive justifications for each step taken. References are appropriately included, indicating thorough independent research. The depth and clarity of the explanation set a high standard, reflecting a sophisticated grasp of feature engineering principles and their application. **27 pts** **Satisfactory** The work presents a solid analytic plan for feature engineering, with clear descriptions of the process and its outcomes. It covers the 'before' and 'after' states of the features, providing sound justifications for the actions taken. While the explanations and justifications are strong, they may lack some of the depth or detail seen in Proficient submissions. References are used effectively, showing a good level of independent research, though the integration and breadth of sources might not be as extensive. **24 pts** **Needs Improvement** The description of the feature engineering steps shows an attempt to formulate an analytic plan, but the execution lacks depth or clarity in places. Descriptions of the 'before' and 'after' states are provided, but justifications for the steps taken are either too brief or not fully convincing. References are included but are minimal or not effectively integrated into the narrative, suggesting a need for more rigorous research and analysis. The work indicates a foundational understanding but falls short of a comprehensive and well-justified approach. **21 pts** **Unsatisfactory** Submits a vague or incomplete account of the feature engineering process, with limited evidence of a coherent analytic plan. Descriptions of the 'before' and 'after' states are inadequate or missing, and justifications for the steps taken are either superficial or absent. The use of references is scant, offering little to no evidence of independent research. The submission demonstrates a fundamental misunderstanding of feature engineering principles or a lack of effort to apply them meaningfully. **0 pts** **Poor/No Efforts** No evidence of any attempt to engage with the feature engineering process is provided. Fails to describe any steps taken, with no mention of 'before' and 'after' states or justifications. There are no references, indicating a complete absence of research. The submission shows no engagement with the assignment's requirements and lacks any substantive content related to feature engineering.	/ 30 pts

Data Analysis	**30 pts** **Proficient** The submission provides an outstanding description of the analytic steps taken, demonstrating a clear and well-reasoned analytic plan. It meticulously details the analysis conducted or proposed, including a comprehensive summary of key findings from the statistical analyses. The inclusion of necessary references indicates a robust engagement with existing literature, underscoring the extensive independent research conducted. The depth, clarity, and thoroughness of the explanation showcase a high level of proficiency in analyzing and interpreting data. **27 pts** **Satisfactory** Presents a clear and coherent analytic plan, detailing the analysis conducted or proposed with a good level of precision. Includes a summary of the key findings of the statistical analyses, though it may not capture the depth or breadth of insights found in Proficient work. References are included, demonstrating a solid effort in independent research, but the range and integration of these sources may be less comprehensive. The work is competent and shows understanding but lacks the exemplary detail or insight of the highest standard. **24 pts** **Needs Improvement** Describes the analytic steps taken, suggesting an underlying analytic plan, but with less clarity and detail than higher grades. The summary of key findings from the statistical analyses is included but lacks depth, and the justifications or implications of these findings are not fully explored. References are present but minimal, indicating a need for broader and more in-depth independent research. The work demonstrates a basic approach to analysis but needs more detailed planning and execution. **21 pts** **Unsatisfactory** Provides a vague or incomplete description of the analytic steps taken, with little evidence of a coherent analytic plan. Key findings from the statistical analyses are either briefly mentioned or omitted, showing a significant gap in analysis or interpretation. The use of references is insufficient, reflecting a lack of substantial independent research. The submission falls short of demonstrating a satisfactory understanding of how to conduct and report on an analysis effectively. **0 pts** **Poor/No Efforts** Shows no attempt to describe any analytic steps or provide a summary of findings. There is a complete absence of any structured analytic plan or evidence of statistical analysis. No references are included, indicating no engagement with existing literature or evidence of research. The submission entirely fails to meet the assignment's requirements, lacking any meaningful content related to the analytic process.	/ 30 pts

Readability	**15 pts** **Proficient** The paper is impeccable in both content and form, entirely free from grammatical errors, reflecting thorough editing and attention to detail. It employs excellent formatting, including the use of sections, bullets, tables, and other organizational tools to enhance clarity and readability. The strategic use of these elements facilitates a seamless flow of information, making complex data and analyses accessible and understandable. The meticulous organization and flawless grammar exemplify the highest standard of academic writing, indicating significant effort in preparation and presentation. **14 pts** **Satisfactory** The document is well-edited with minimal grammatical errors, showing that considerable time was dedicated to reviewing the paper. It makes good use of formatting features like sections, bullets, and tables to organize content effectively, though the integration of these elements may not be as polished or as effective in aiding comprehension as in Proficient submissions. The overall presentation is clear and organized, demonstrating a high level of care in the paper's preparation. **12 pts** **Needs Improvement** While the paper shows some effort towards editing, minor grammatical errors are present, suggesting that more thorough review is needed. The use of formatting tools (sections, bullets, tables, etc.) is attempted, but these are not always employed effectively to enhance the paper's organization or the reader's understanding. The effort to structure the document is evident, but the execution lacks the consistency and precision necessary for higher levels of achievement. **11 pts** **Unsatisfactory** The paper contains noticeable grammatical errors, indicating insufficient editing. Formatting and organizational tools are used sparingly or ineffectively, failing to contribute meaningfully to the paper's clarity or the organization of ideas. The overall presentation appears neglected, with a clear need for improved formatting and a more diligent editing process to reach an acceptable academic standard. **0 pts** **Poor/No Efforts** There is no indication that any editing was performed, with the paper riddled with grammatical errors. It lacks any form of effective formatting or organization, such as sections, bullets, tables, etc., resulting in a document that is difficult to follow and understand. The complete absence of effort in both the writing and presentation aspects demonstrates a disregard for the basic requirements of academic or professional documentation.
